

Ford Tourneo Custom/Transit Custom Reset the Diesel Particulate Filter Differential Pressure Sensor Learned Values

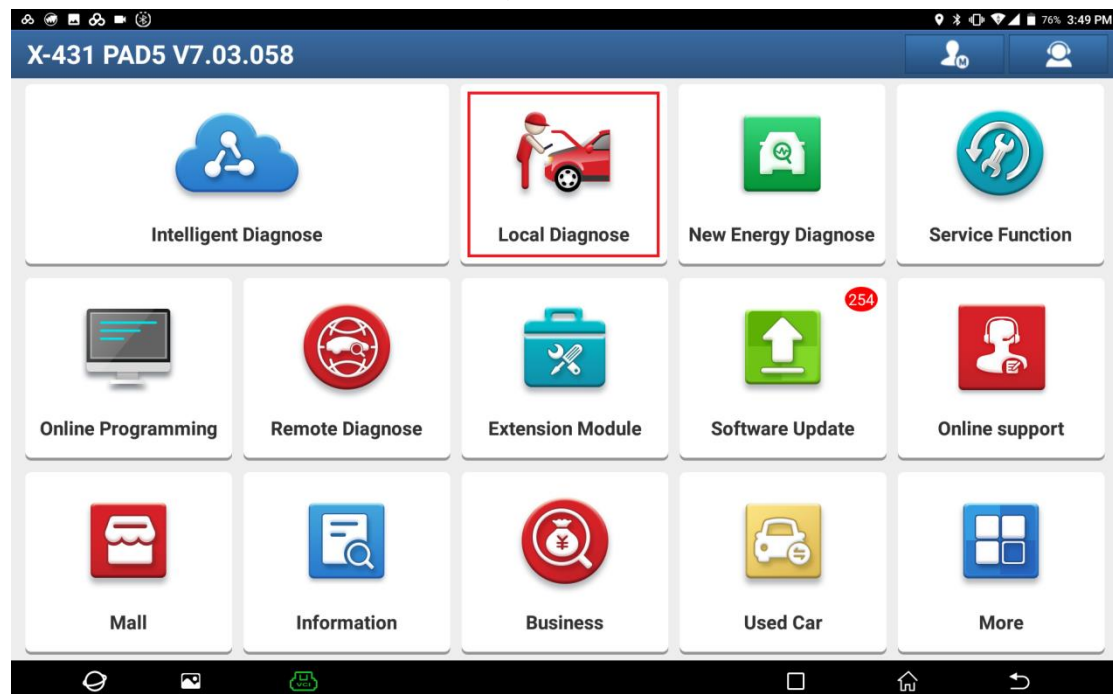

Supported equipment: Launch's full range of comprehensive diagnostic equipment

Current equipment: PAD 5

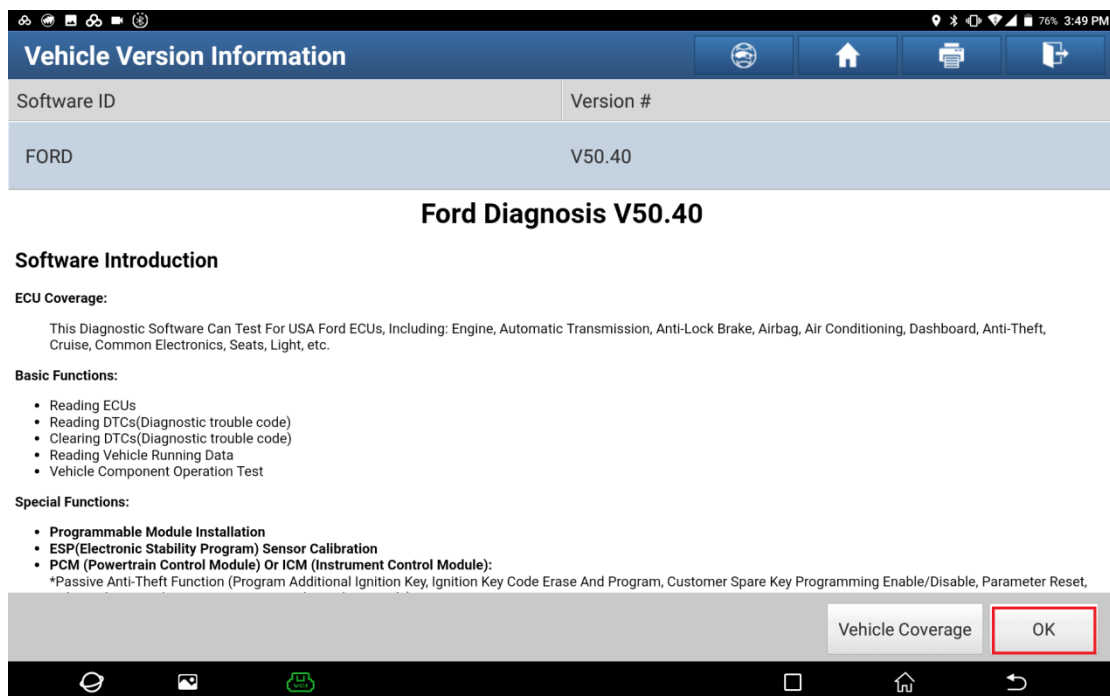

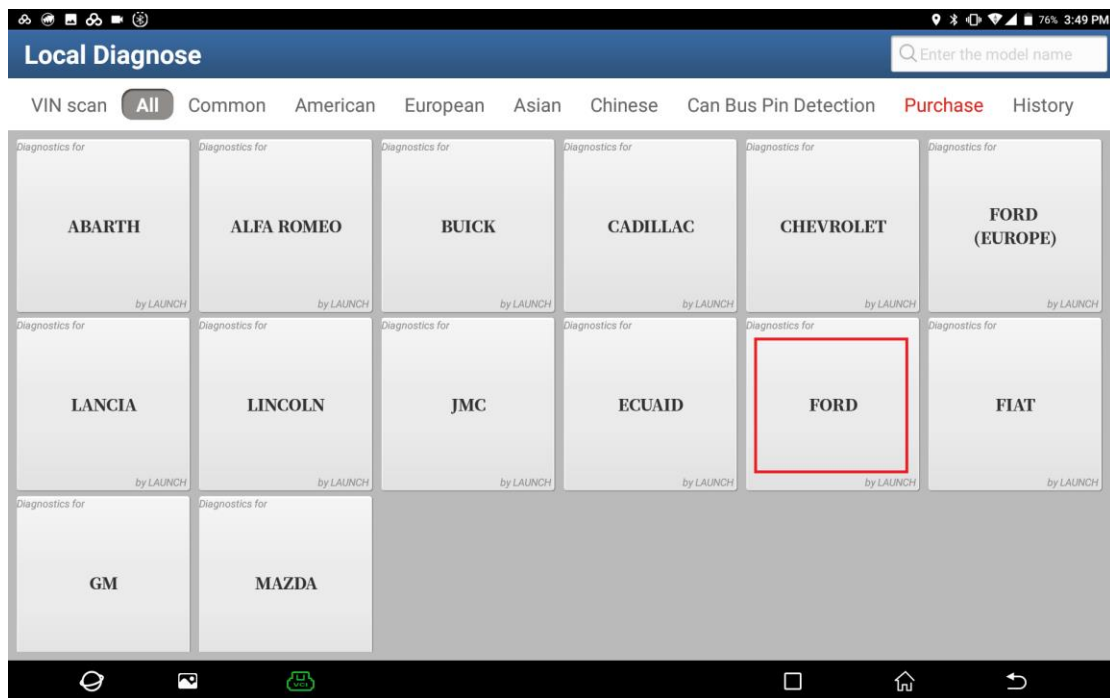

Function Description: After a new differential pressure sensor is installed, this service function must be performed to reset the differential pressure sensor learned values.

Tested model: Ford/2023/ Tourneo Custom/Transit Custom, VIN:
WF0HGHY74PTK*****

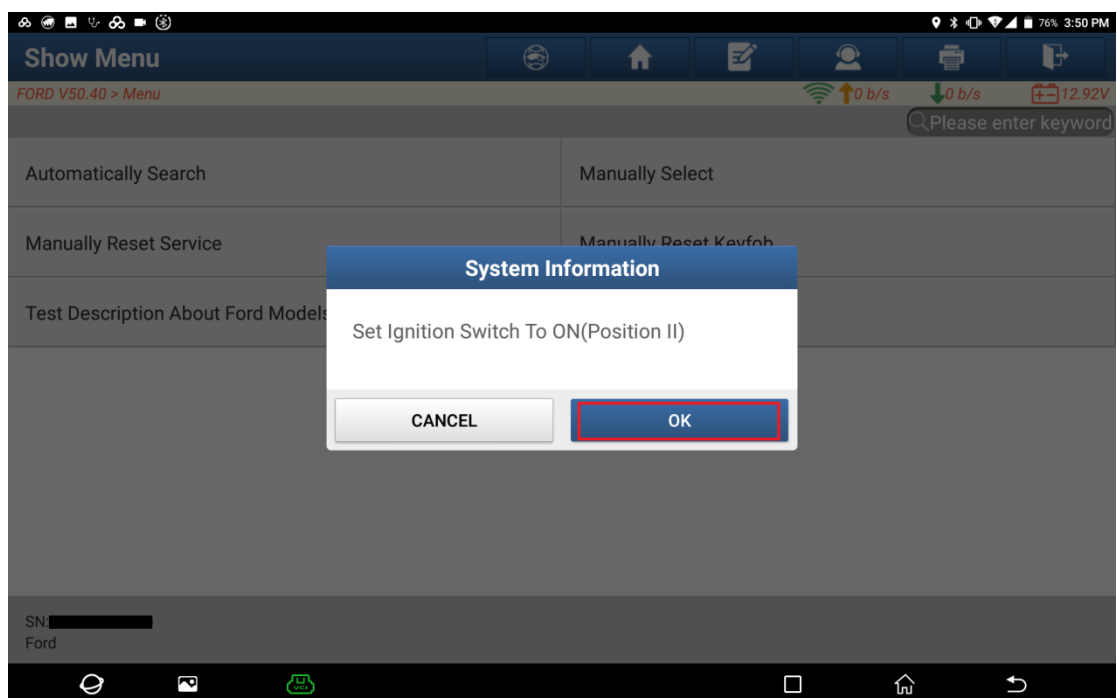

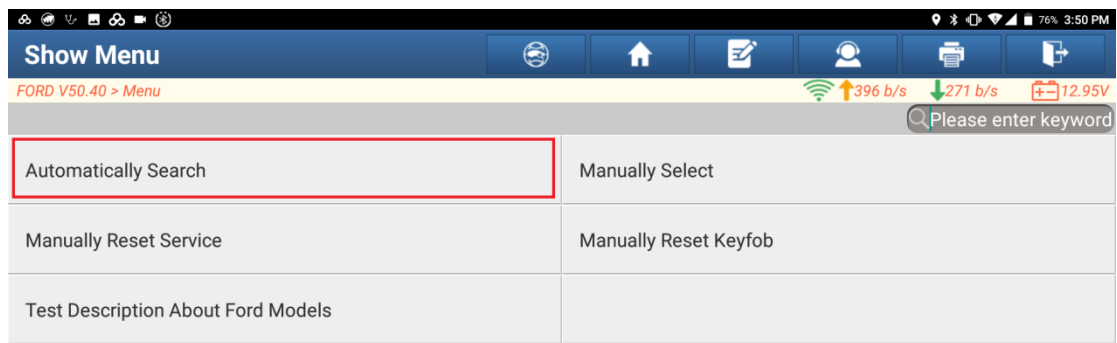

1. On a PAD 5, choose [Local Diagnose].

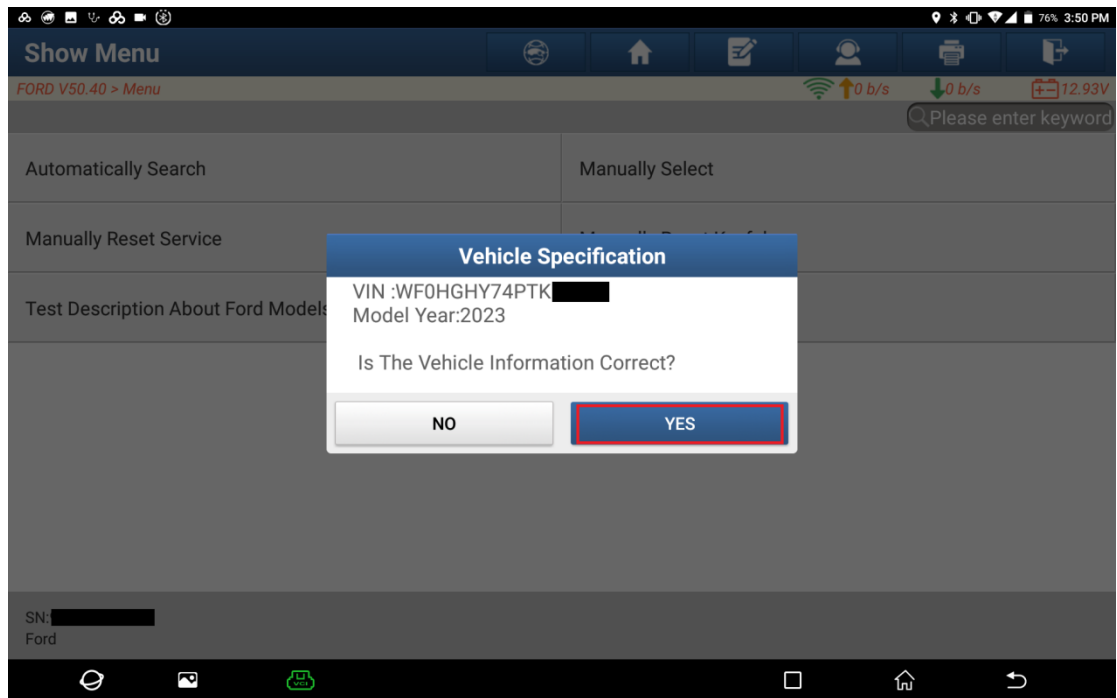

2. Choose [Ford] to test.

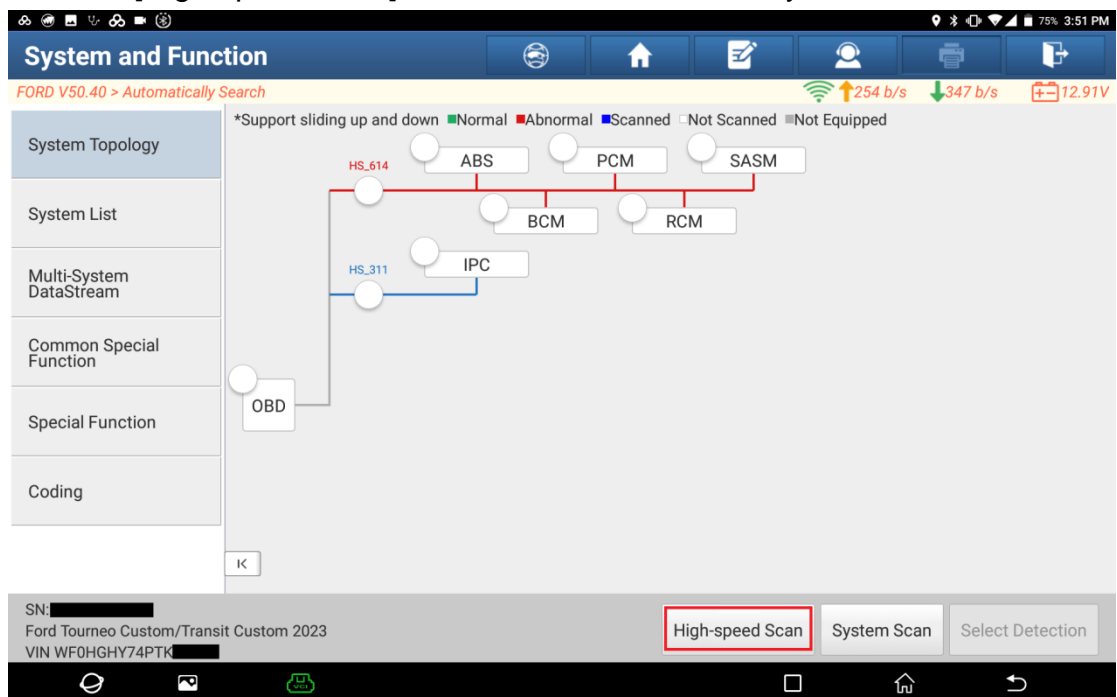

3. Choose [Automatically Search] to identify car models automatically.

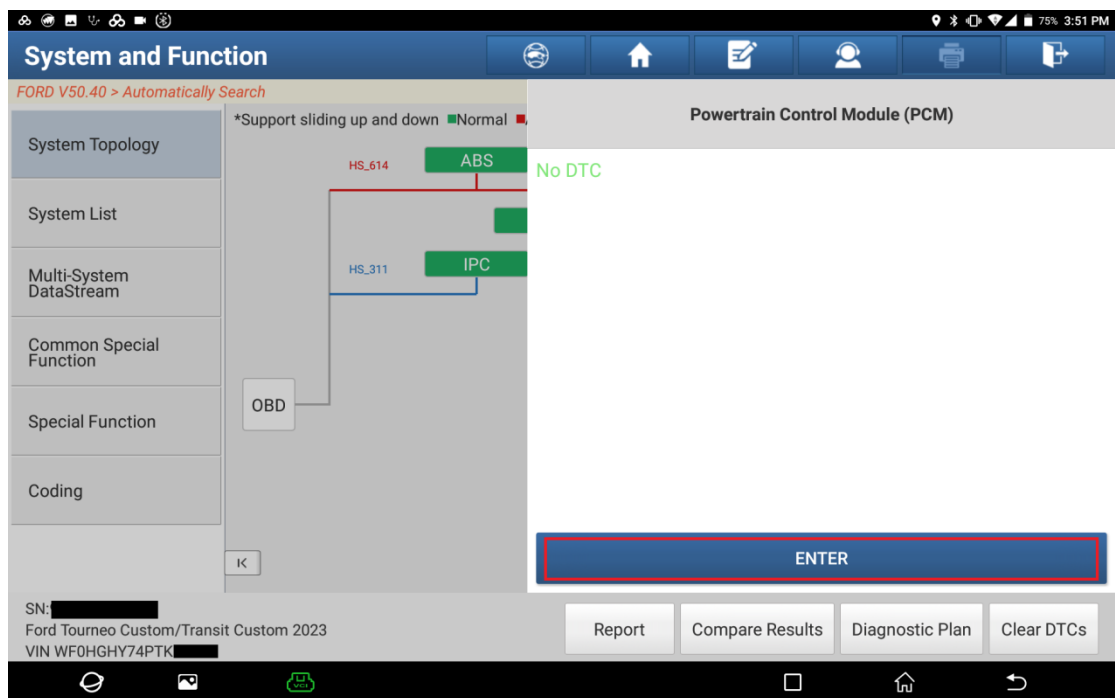

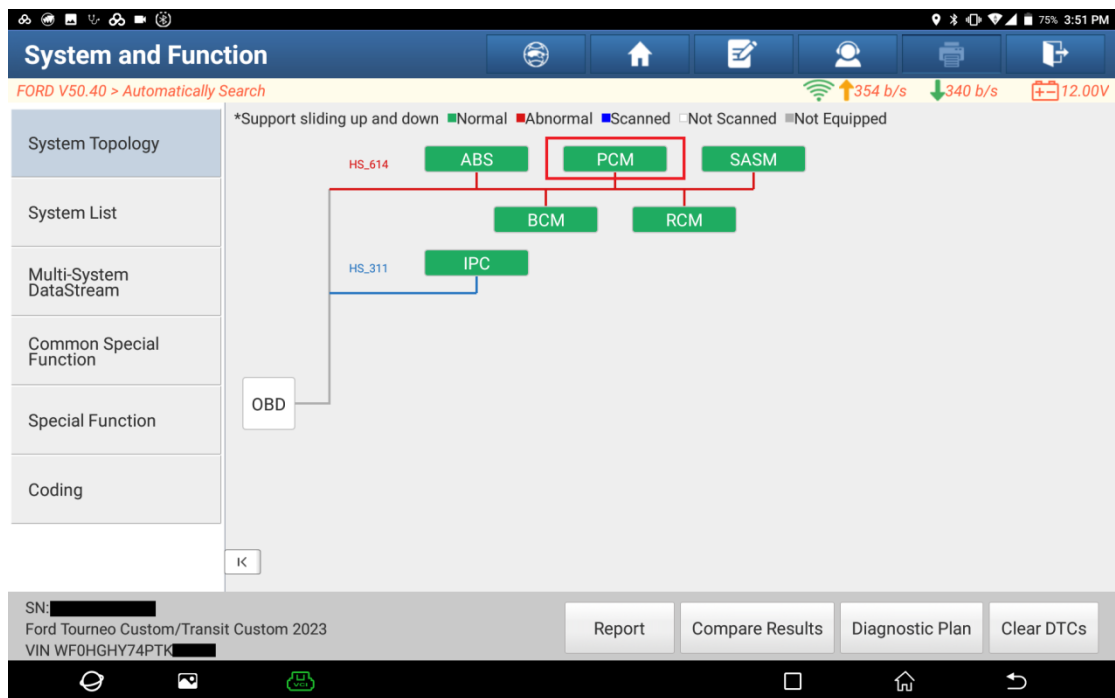

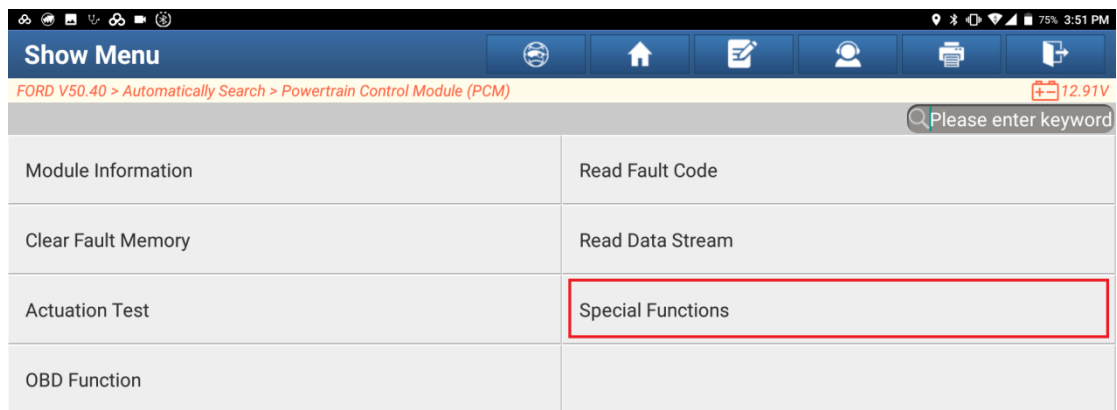

4. Click [High-speed Scan] to scan the entire vehicle systems.

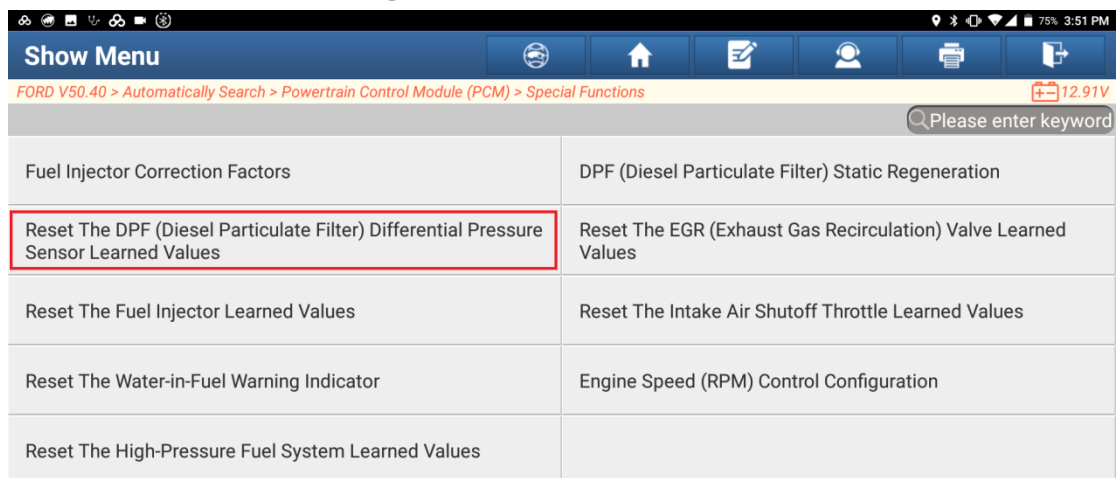

5. Click [PCM (Powertrain Control Module)] to access the system.

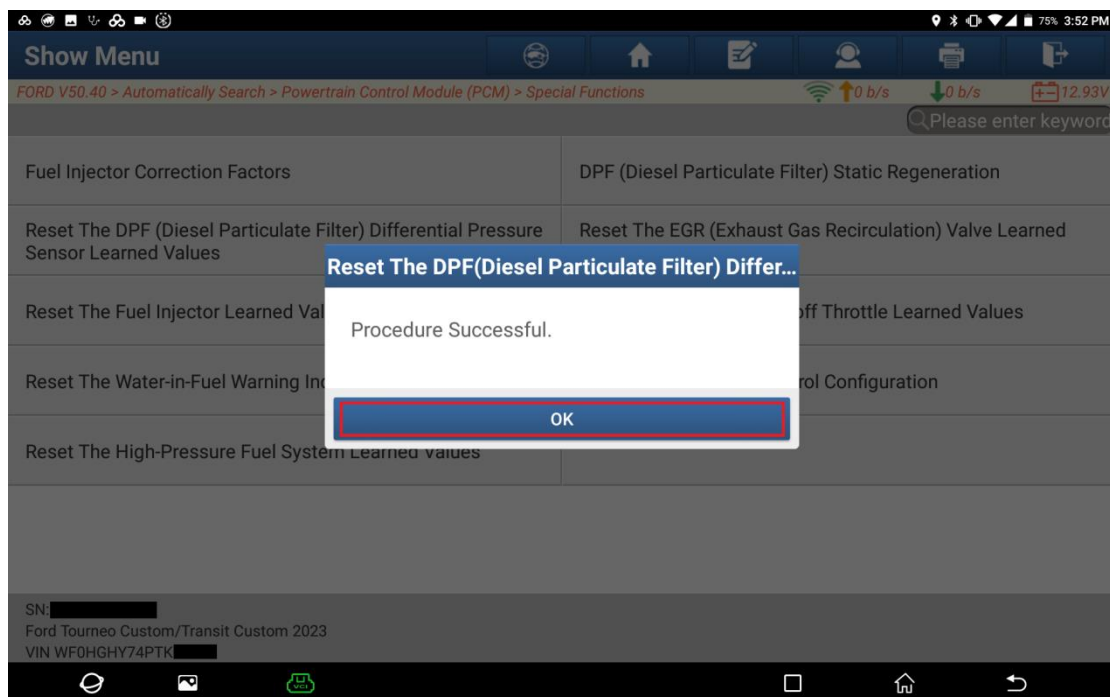

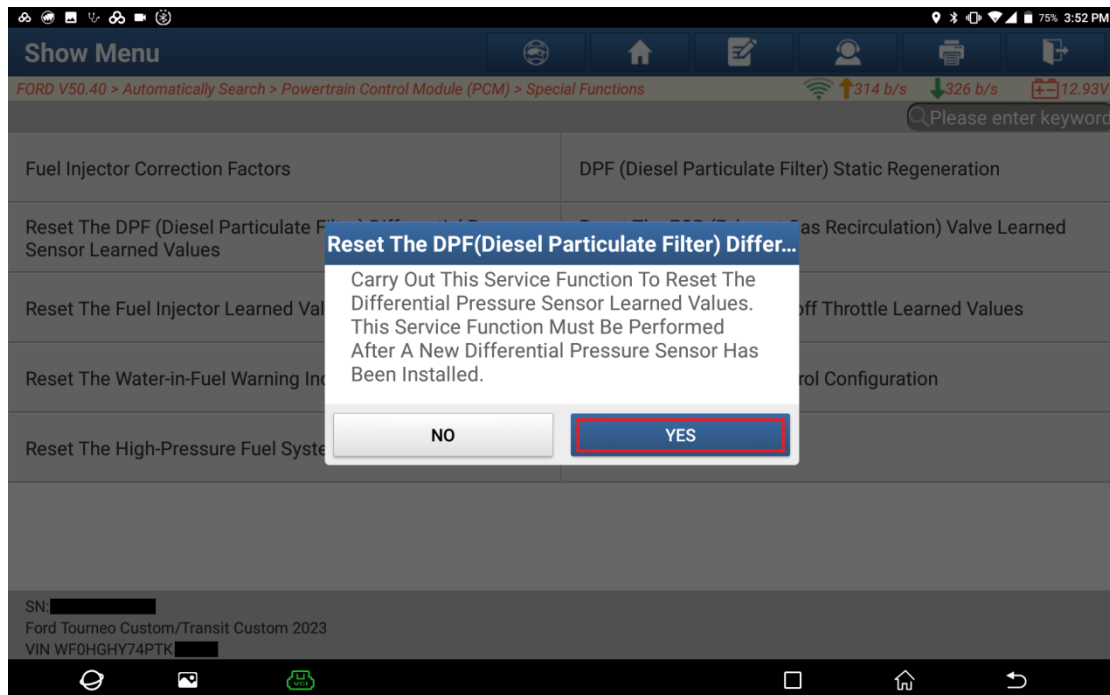

6. Click [Special Functions].

7. Click [Reset The DPF (Diesel Particulate Filter) Differential Pressure Sensor Learned Values].

8. Click OK. The program for resetting the DPF differential pressure sensor learned values is completed.
